

HA-1000

Hamilton's legendary 4^{1/2}" drive-up system

HAMILTON AIR®

Hamilton Air's HA-1000 is engineered to deliver long-term reliability

The HA-1000's superior quality, affordability and flexibility set the industry standard for 4 1/2" pneumatic drive-up systems.

Options:

- Available in upsend and downsend
- Adaptable to replace old 4" LeFebure units without replacing the tubing
- Extra deep downsend customer units are also available for replacement of old systems
- Several Operator/Teller Unit options allow you to create a system that fits your needs

Easy To Maintain

Corrosion-resistant stainless steel and polymer coated finishes combine to provide an attractive, easy-to-maintain system

Low Cost of Ownership

For over 20 years, the HA-1000 has been at the top of the industry for reliability. High-quality, non-proprietary, off-the-shelf components are used. The HA-1000 is engineered with two thoughts in mind -- Simplicity and Reliability.

Simple Installation

A single tube is the only thing between the operator/teller and the remote customer unit. There are no blower packs to be installed in the canopy or remote location.

Hamilton's patented PowerStar Air Turbine is located in each customer terminal unit. Electrical power is required only at the drive-through island.

Superior Audio & Video Communications

Hamilton's Model 5500 Series Audio System provides crystal-clear, full-duplex, digital communication between customer and service representative. An optional two-way, LCD Video system can further enhance the customer's experience.

HA-1000 downsend
